

VERY LOW DROP 5V VOLTAGE REGULATOR WITH RESET

- PRECISE OUTPUT VOLTAGE ($5V \pm 4\%$)
- VERY LOW DROPOUT VOLTAGE
- OUTPUT CURRENT IN EXCESS OF 500mA
- POWER-ON POWER-OFF INFORMATION (RESET FUNCTION)
- +80/-80V LOAD DUMP PROTECTION
- OVERVOLTAGE AND REVERSE VOLTAGE PROTECTION
- SHORT CIRCUIT PROTECTION AND THERMAL SHUT-DOWN

can work correctly even during the cranking phase, when the battery voltage could fall as low as 6V. Furthermore, it incorporates a complete range of protection circuits against the dangerous overvoltages always present on the battery rail of the car. The reset function makes the device particularly suited to supply microprocessor based systems: a pulse is available (after an externally programmable delay) to reset the microprocessor at power-on phase; at power-off, this pulse becomes low inhibiting the microprocessor.

The L487 is a monolithic integrated circuit in Pentawatt® package specially designed to provide a stabilized supply voltage for automotive and industrial electronic system. Thanks to its very low voltage drop in automotive applications the L487

ABSOLUTE MAXIMUM RATINGS

V_i	Forward input voltage	35	V
V_i	Reverse input voltage	-18	V
	Positive transient peak voltage ($t = 300\text{ms}$)	80	V
	Negative transient peak voltage ($t = 100\text{ms}$)	-80	V
T_{op}	Operating junction temperature	-40 to 150	°C
T_{stg}	Storage temperature	-55 to 150	°C

TEST CIRCUIT

* Min. $33\mu\text{F}$ and max. $\text{ESR} \leq 3\Omega$ over temperature range
