

### ■ Features

- Universal AC input / Full range
- Built-in active PFC (Power Factor Correction)
  - Protection: Short circuit / Overload / Over voltage / Over temperature
- Cooling by free air convection
- Can be installed on DIN rail TS-35/7.5 or 15
- UL 508 (industrial control equipment) approved
- EN61000-6-2 (EN50082-2) industrial immunity level
- 100% full load burn-in test
- **3 year warranty**

### ■ Applications

- Industrial control systems
- Semi-conductor fabrication equipment
- Factory automation and control
- Electro-mechanical systems
- Building automation

### ■ Description

NDR-240 is one economical slim 240W DIN rail power supply series, capable of being installed on TS-35/7.5 or TS-35/15 mounting rails. The body is designed 63mm in width, which allows space saving inside the control cabinet. The entire series allows for the full range of AC input from 90VAC to 264VAC and conforms to EN61000-3-2; the norm for European Union regulation of harmonic current.

The NDR-240 is designed with a metal housing that enhances the unit's power dissipation. With a working efficiency of up to 90%, the entire series can operate at the ambient temperatures between -20°C to 70°C using air convection cooling only. It is equipped with constant current over-load protection, ideal for many inductive and capacitive load applications. The series complete protection functions and relevant certificates for industrial control apparatus (UL508, TUV EN60950-1, etc.) make the NDR-240 a very competitive power supply solution for industrial applications. **May be used in place of the DR-120-24 for higher current output!**

NOTE	<p>1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.</p> <p>2. Ripple &amp; noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf &amp; 47uf parallel capacitor.</p> <p>3. Tolerance: includes set up tolerance, line regulation and load regulation.</p> <p>4. Derating may be needed under low input voltage. Please check the derating curve for more details.</p> <p>5. Installation clearances: 40mm on top, 20mm on the bottom, 5mm on the left and right side are recommended when loaded permanently with full power. In case the adjacent device is a heat source, 15mm clearance is recommended.</p> <p>6. The power supply is considered a component which will be installed into O.E.M. equipment. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." *</p> <p>7. The ambient temperature derating of 3.5°C/1000m for operating altitude higher than 2000m(6500ft).</p> <p>*available at <a href="http://www.meanwell.com">www.meanwell.com</a></p>
